

- Add some social media links (linkedin, facebook, etc) to testimonial tiles, to give each testimony some credentials

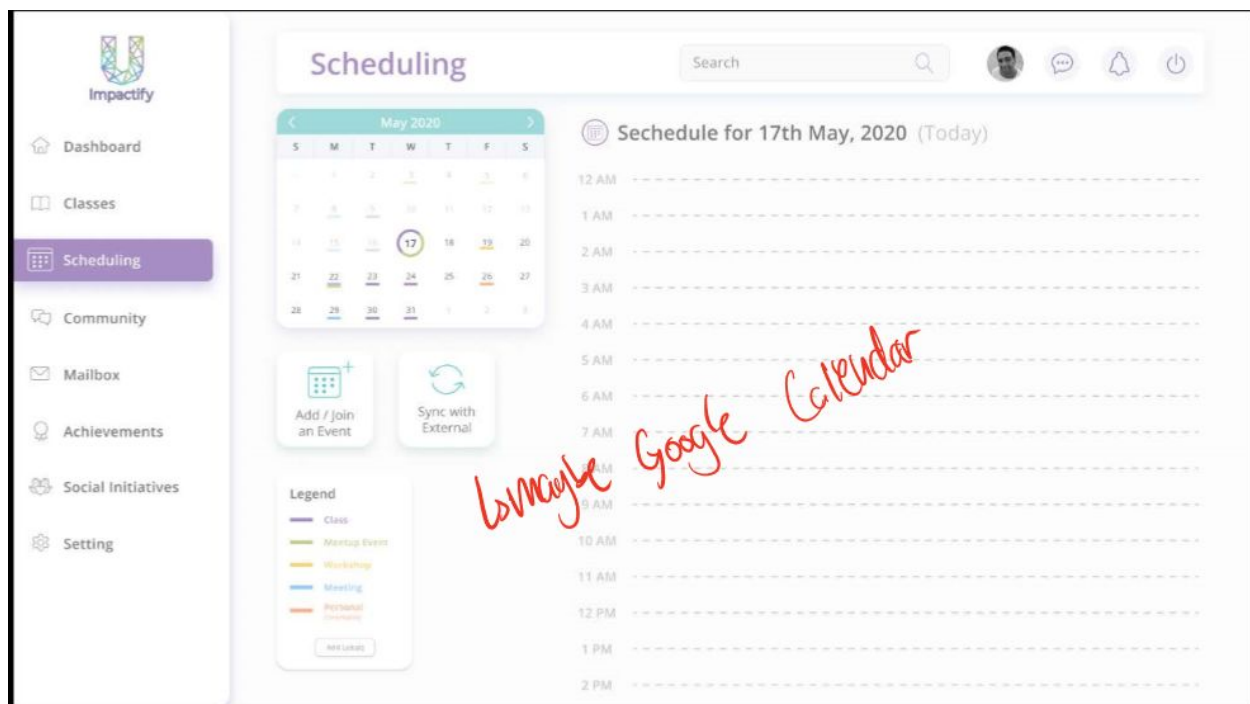

- Remove the instant demo from our features planned

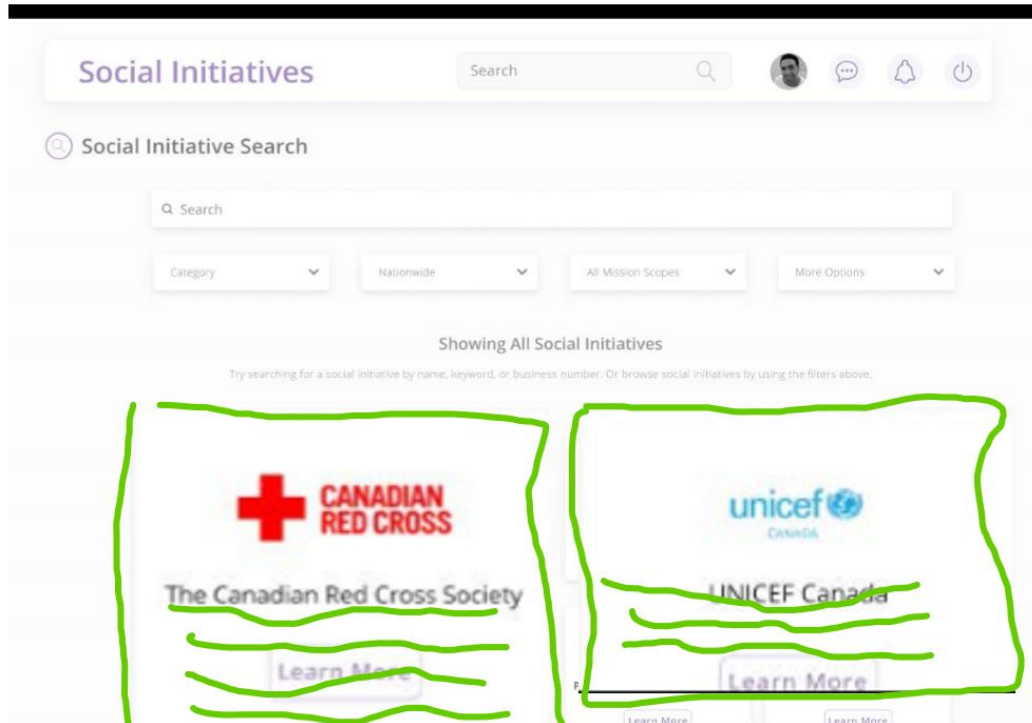

- If a user is not signed up they can still browse the top feature courses, to showcase the platform's top offerings
- Side nav will be collapse as we think having open all the time is both distracting and takes up valuable screen real estate (similarly to Amazon)
- No instant messaging, it's not part of this site's core features therefore should not be focused on
- Remove news, similar to messaging it's not important for this version of the product
- Clicking power off will give a tab for signout
- "View garden" button leads to achievements

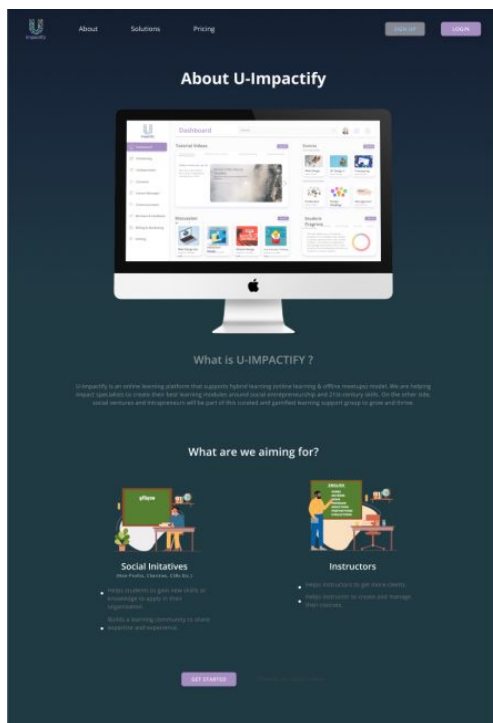

- Pre Recorded lectures because we don't think it's viable to have live lectures in the start
- No share class button, not important for the core features of the app (sharing desktop url manual fills the same purpose)
- Assignments work like they do in quercus

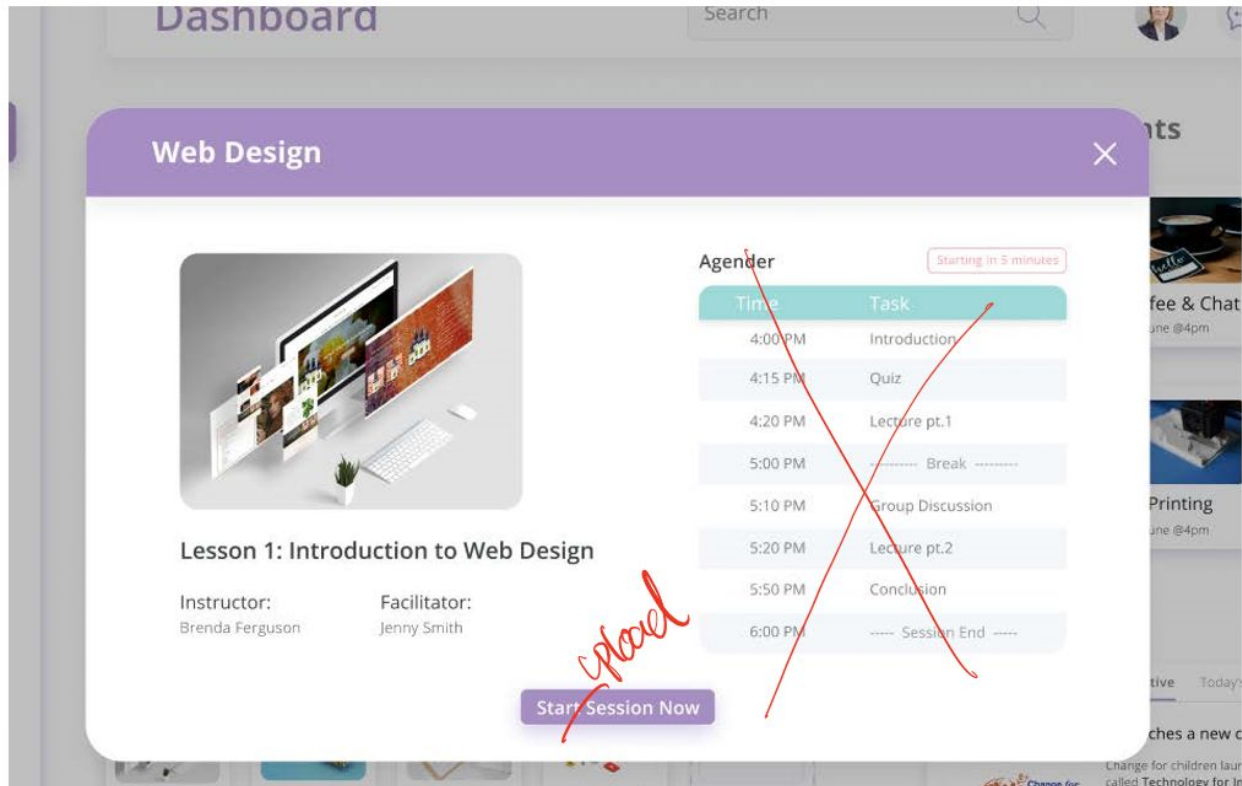

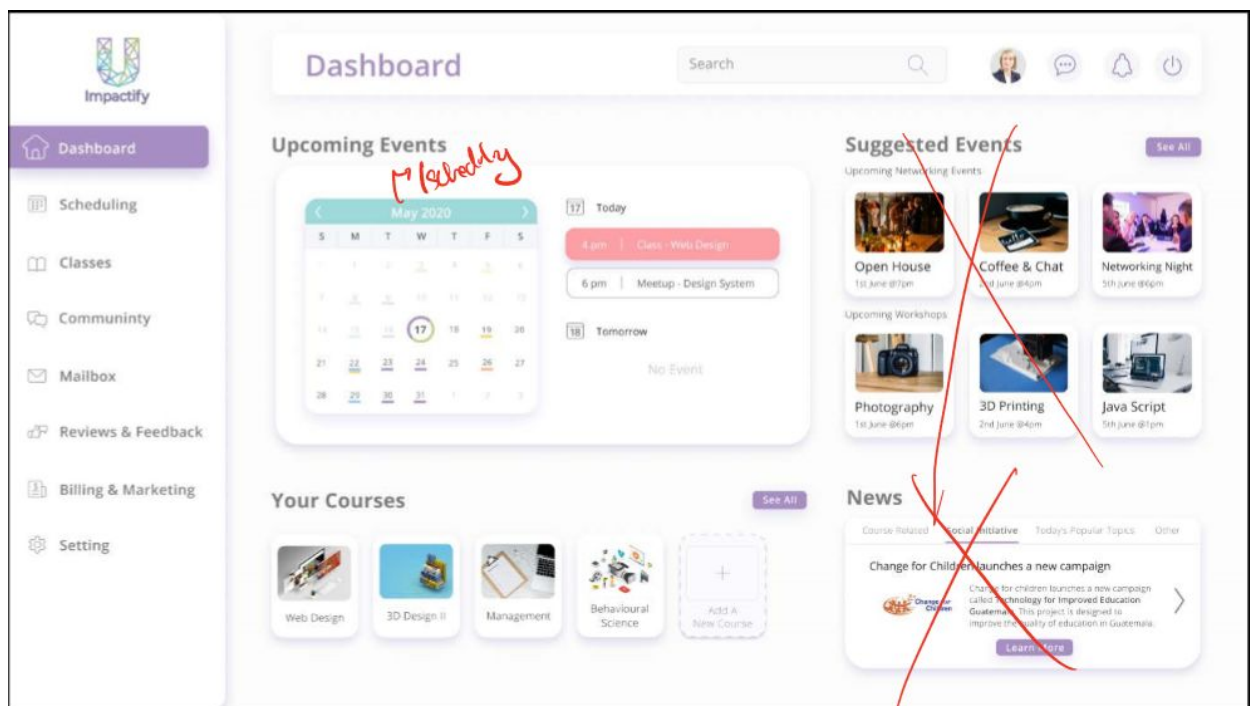

- Bigger tiles with more descriptions, make it more inviting and informative for users who are scrolling
- Hide the Top nav when scrolling far to help users focus more on the tiles when they are endlessly scrolling

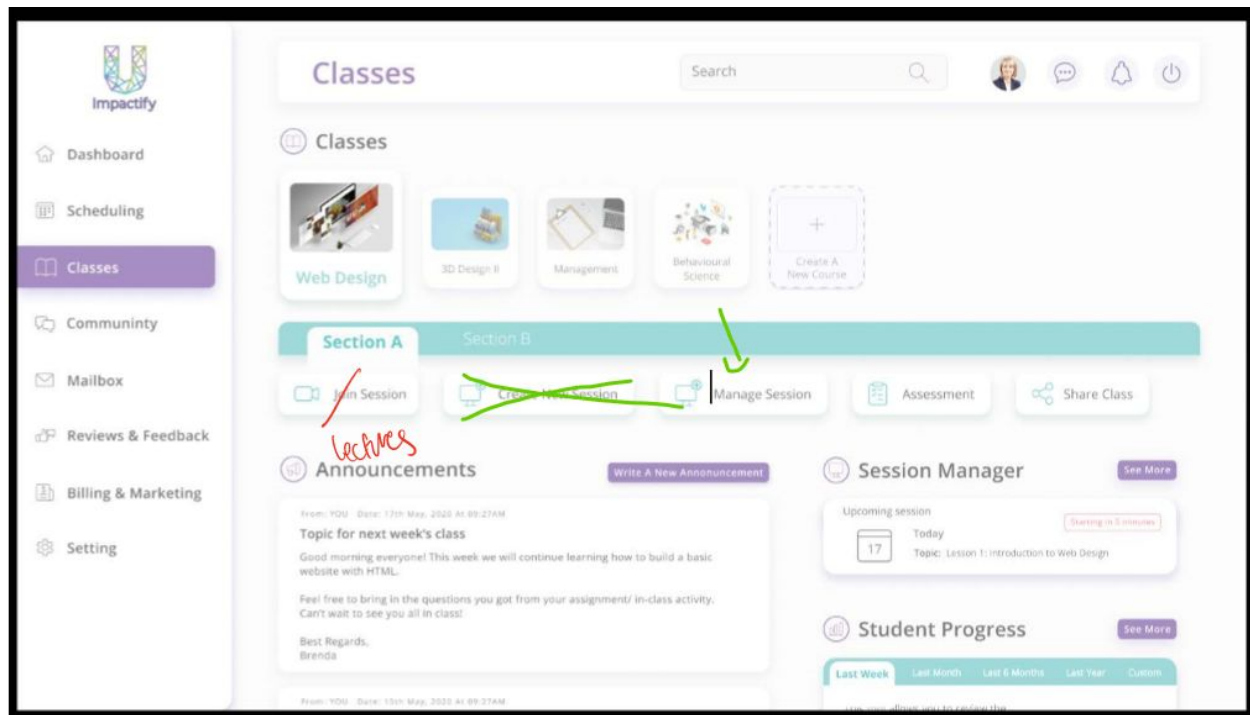

- Dark Mode, a new features that we believe will help the sight with its accessibility

- Clicking on class tiles on dashboard links to the class page instead of this focused view. It is unitive to have a small calendar on the front page and a detailed one on the side but still have a tile dedicated to showing basic course information and the day's schedule

- Cut suggested events and news (same as student page)

- Merge buttons together
